

01 TRAVEL PERFORMANCE · IP ACQUISITION OPPORTUNITY

Check-in is at 3pm.
Their body thinks it’s 3am.

02 THE OPPORTUNITY

An outright acquisition of the Travel Performance IP.

A protocol that plans each guest's stay around their body clock and journey. The framework exists. Papillon completes the detailed protocol with a PhD jet lag specialist as part of the acquisition; the acquirer builds the technology and commercialises it across hospitality and wellness real estate.

BUILT FOR

01 LUXURY HOSPITALITY AND WELLNESS REAL ESTATE

Hotels, resorts, hotels with members' clubs, hospitality groups and wellness real estate developments, delivering it through the rooms, F&B, spa and fitness they already run.

02 THEIR GUESTS, MEMBERS AND RESIDENTS

Business and leisure travellers arriving long-haul, corporate groups that need their people at their best, and the members and residents of clubs and wellness real estate developments.

03 THE INVESTMENT

Luxury hotels are investing heavily in wellness.

But guests who've crossed time zones are often too exhausted from travelling to enjoy it, and don't know what to use, and when, to feel better.

WHY IT STAYS THAT WAY

Wellness usually sits with a director responsible for the department's operational and financial direction: the team, the standards, the budget.

Timing it to each guest's journey means connecting the rooms, the food, the spa and the gym, which sit across different departments, so currently no one owns it across the hotel.

That's what Travel Performance is designed to do, using circadian rhythm science and AI, personalised to each guest.

ACROSS THE PROPERTY

Sleep · Nutrition · Fitness · Recovery · Technology

04 THE TRAVELLER

Five guests arrive at a Dubai hotel on the same afternoon, each on a different body clock. The hotel knows when they arrive, but not what their bodies need.

Each has a reason for being there, and no time to lose to jet lag.

All five have access to the same spa, gym, restaurants and rooms, but each will want them at a different time, for the state they arrive in and what they came to do.

BODY CLOCK ON ARRIVAL, 3PM IN DUBAI. ILLUSTRATIVE.

FROM LONDON	FROM NEW YORK	FROM MUMBAI	FROM SINGAPORE	FROM RIYADH
12:00	07:00	16:30	19:00	14:00
MIDDAY	EARLY MORNING	LATE AFTERNOON	EVENING	EARLY AFTERNOON

SCHEDULE	DXB	09:05	UTC+4	HKG	16:25	UTC+8	DXB	05:50	UTC+4	LHR	13:35	UTC+1	DXB	21:15	UTC+4	DXB	07:45	UTC+4	LHR	11:10	UTC+1	DXB
BODY CLOCK ILLUSTRATIVE	AUH	09:05	UTC+4	DXB	12:25	UTC+4	HKG	09:50	UTC+8	DXB	16:35	UTC+4	LHR	18:15	UTC+1	DXB	07:45	UTC+4	DXB	14:10	UTC+4	LHR

05 WHY THE TIMING MATTERS

A better mattress can help a guest sleep.
It can’t reset a body clock that’s still in another time zone.

Getting the timing right can.

68%

of international business travellers regularly suffer jet lag symptoms.

78%

of hotel guests who sleep better than expected say they’ll definitely return.

29%

of guests sleep better than expected. The rest don’t.

Hotels have the what.
The protocol gives them the when.

06 THE COMMERCIAL CASE

When every luxury hotel can buy the same wellness inventory, owning it stops being a reason to choose you.

For a guest who's crossed time zones, wellness means recovery.

TODAY: AMENITIES TO LIST

Spa and treatments

Gym and recovery suite

Sleep and room environment

Restaurants and room service

AND DECISIONS TO MAKE

What to eat, which treatment and whether there's time for one, what exercise to do and whether to visit the gym at all. Every choice is left to a guest already emotionally drained and low on energy from the journey, with jet lag compounding both.

77% of long-haul travellers say jet lag affects their concentration.*

WITH TRAVEL PERFORMANCE: AN OFFER TO SELL

Travel Performance is designed to time light, food, movement, sleep and treatments to each guest's journey, so every service the hotel already offers works with their circadian rhythm, not against it.

These are departments you already run, and once they're timed to the guest, they become reasons to book, spend and return.

DECISIONS ELIMINATED

Before they arrive, each guest would receive a recommended plan for the whole stay, timed to their body clock: when to eat, when to train, when to recover and when to sleep. Every service is offered at the right time for them, so there's nothing left to decide or figure out. That peace of mind has a price, and it's yours to sell.

07 WHAT THE ACQUIRER OWNS

The protocol, the delivery model and the commercial proposition.

THE PROTOCOL

Timing rules for every stay

Designed to plan each guest's stay around their body clock and journey: time zones crossed, flight length, trip purpose and important commitments. The detailed timing rules are developed with a PhD jet lag specialist as part of the acquisition.

THE DELIVERY MODEL

How a property delivers it

How a hotel, club or wellness real estate development maps its rooms, lighting, F&B, spa, fitness and team onto each person's plan, across the nine areas of the guest journey.

THE PROFILE AND PROPOSITION

Designed to travel with the guest

A guest-owned profile design, so the hotel never holds personal health data and what's learned on one stay carries into the next. Plus the commercial proposition and the full Travel Performance presentation.

08 WHERE IT STANDS

The framework exists.
The rest is developed after acquisition.

01 EXISTS TODAY

The protocol framework, the nine-area guest journey, the delivery model, the guest-owned profile design and the commercial proposition.

02 DEVELOPED AFTER ACQUISITION

The detailed scientific protocol and timing rules are developed with a PhD jet lag specialist and Papillon as part of the agreed acquisition and development package. The acquirer's CTO leads the software build, integrations and deployment.

03 MARKET INTEREST

Conversations are open with several luxury hotel groups, and an ultra-luxury hotel in Dubai has expressed interest for 2027. Guests already pay for body-clock wellness: Maybourne's The Emory sells a City Circadian Reset at £1,650 for two nights, on top of the room rate.

09 TRAVEL PERFORMANCE

Nine areas shape how a guest feels. The hotel can influence all of them, when it knows the right timing.

BEFORE & ON ARRIVAL

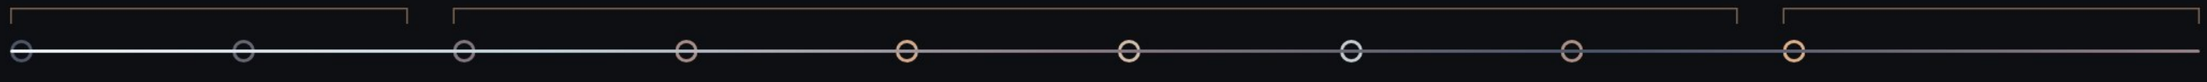

Anticipating the journey and shaping the first hours at the property.

THE STAY

The reason for their stay, and the moments they can't afford to lose.

DEPARTURE & AFTER THE STAY

How they leave, and the experience that continues on their onward journey.

01 Schedule and timing

02 Before arrival and first hours

03 Light and environment

04 Sleep

05 Nutrition

06 Hydration and replenishment

07 Movement and fitness

08 Recovery

09 Departure and after the stay

10 WHAT THE HOTEL ALREADY KNOWS

The flight number isn’t just data.
It’s the start of the guest experience.

Whether a guest has crossed one time zone or eight, most hotels look after them in exactly the same way.

01 ALREADY IN THE BOOKING

- Where they’ve come from
- How many time zones they’ve crossed
- How long they’ve been travelling
- What time it is for their body on arrival

02 A SHORT QUESTIONNAIRE BEFORE ARRIVAL

Sent with the booking confirmation: whether they’re a morning or evening person and the purpose of the trip.

03 A BESPOKE PLAN FOR EACH GUEST

Emailed before arrival: when to eat, train, recover and sleep across the stay. They can accept or change any part of it, and the hotel has everything arranged and ready for when they arrive.

11 THE RETURNING GUEST

Most hotels forget a guest at checkout. Yours keeps learning about them.

STAY 1

The hotel learns

From a business traveller's booking and questionnaire data, the hotel sets his plan: when and what he eats, how, where and for how long he trains, and when he recovers and sleeps, set by the time zones he's crossed and the schedule ahead of him. His body clock, and which parts of the plan he accepted, changed or declined, start his travel profile,* alongside his other preferences.

AFTER HE LEAVES

The hotel stays with him

After checkout, the usual last contact is the bill and a review request. Yours follows him home: where he's opted in, your email or app sends his recovery plan for the days after the flight, when to sleep, train and eat. Each message carries your brand into his routine, keeping the hotel front of mind until he books again.

STAY 2 ONWARDS

The hotel optimises every stay

How he recovers is added to his travel profile, so when he books again it already holds his body clock and what he accepted, changed or declined last time. The new journey, and anything that's changed, is added, so his plan builds on everything the hotel already knows about him. At any other hotel, he'd be starting again with a team that knows nothing about how he travels.

*Designed to carry preferences from one stay to the next, where your systems and guest permissions allow.

12 THE COMMERCIAL OUTCOME

Room rates alone can no longer carry growth. The hotels winning now are bundling wellness, unlocking ancillary revenue.*

GLOBAL, SINCE 2019**

+19% Revenue per available room

+25% Booking costs per available room

Travel Performance doesn't ask a GM to believe in wellness, but to see a greater return on the wellness they've already invested in, measured in the figures they already report on.

TREVPAR

Revenue beyond the room

The package, the spa, F&B and in-room dining all count towards total revenue per available room, not only the rate.

ADR

A rate worth paying more for

A Travel Performance stay package, sold before arrival and priced above the standard room rate.

SPEND PER GUEST

More of your services sold

Guests who feel ready to enjoy their stay book more of the treatments, dining and training you already offer.

OFF-PEAK UTILISATION

Revenue from quieter hours

Body-clock timing brings guests into the spa, gym and restaurants at hours that usually sit empty.

GSI AND NPS

Scores that sell the next stay

Guests who sleep and recover better rate the stay higher, in the reviews other travellers read before booking.

REPEAT BOOKINGS

Returns that cost less to win

A guest with a travel profile has a reason to book with you again, designed to bring them back direct as booking costs keep rising.

*Michael Grove, HotStats, UK hotels: Q1 revenue growth isn't outpacing costs, June 2026. **Source: Duetto and HotStats, global aggregated hotel performance analysis, 14 January 2026.

13 THE VALUE TO HOTELS

What a hotel stands to gain.
Six improvements for each hotel.

01 GUESTS

Faster recovery

Designed to reduce guests' jet lag recovery time, so they sleep well, think clearly and are physically ready sooner. They're at their best for the meetings, events or occasions they travelled for, and go home without losing days to recovery.

02 TEAMS

One plan, every department

Every department works from the same plan for each guest, so they know what to offer and when, without having to learn circadian science. The hotel's team still leads the hospitality, without disruption.

03 SALES AND MARKETING

A stay worth paying more for

A package priced above the standard room rate, and a story to sell to international travellers and corporate clients, who are buying back the days travel usually costs them.

04 FACILITIES

Busier at quieter hours

Each guest's plan follows their body clock, not the clock on the wall, so demand spreads across the day. Spa, gym and restaurants are used more, including during off-peak hours, increasing the return on the facilities the hotel has already invested in.

05 BRAND

The brand goes home with them

Branded recovery plans follow guests home, keeping the hotel front of mind until they book again.

06 POSITION

A reason to choose the hotel

Each hotel's protocol is built around its own services, guests and brand, so the stay is its own, not an off-the-shelf wellness programme.

14 HOW IT SCALES

Built once, licensed across hotels.
The guest profile travels between them.

Each hotel adapts the protocol to its own guests, facilities and operations, so the experience is its own.

A SINGLE HOTEL

One property.
One tailored experience.

A hotel adapts the protocol to its existing rooms, F&B, spa, fitness and guest services.

A HOTEL GROUP

Start with a flagship.
Expand across the portfolio.

Establish Travel Performance at one property, then extend it across the group.

ACROSS GROUPS

One traveller.
Every licensed hotel.

The guest owns their profile, so what's learned travels with them to whichever licensed hotel they stay in next.

The software is not yet built. The acquirer funds, builds and licenses it.

PAPILLON LUCK, FOUNDER

15 WHO DESIGNED IT

Designed by someone who knows the guest.

LUXURY WELLNESS, 18 YEARS

One of London's early in-hotel personal trainers at The Cadogan, coaching private clients who travel internationally, including members of UAE royal families. Then created JetFuel, a luxury travel supplement range launched with NET-A-PORTER and MR PORTER, then Selfridges, and bought by five-star hotels for suites, lounges and private jets.

INTERNATIONAL FINANCE, 14 YEARS

Schroders and CSFB, then Goldman Sachs, where Ron Beller recruited her to Peloton Partners, a London hedge fund start-up that grew to $2.6 billion AUM and one of four hedge fund start-ups she helped launch.

Ran global multi-city roadshows and organised business and leisure travel for high and ultra-high-net-worth clients, which is how she knows exactly what these travellers need, and when.

THE SCIENCE AND THE AI

Travel Performance combines Papillon's first-hand experience of international travellers with timing rules to be developed with a PhD jet lag specialist, so the AI never invents the science. The AI planning engine is designed to apply those rules to each guest's journey, producing a bespoke plan and clear instructions for the relevant hotel departments. The science determines the guidance; the AI makes it scalable. Papillon completes the detailed protocol with a PhD jet lag specialist as part of the acquisition.

> *"I've been travelling for business over 20 years and this was undoubtedly the best business trip I've ever experienced; my mental state was off the charts. I felt very positive, strong and balanced throughout the trip. I'm actually really looking forward to travelling long-haul again but only if Papillon looks after me, I can't imagine going back to travelling how I used to."*

> GLOBAL PARTNER, TOP-FIVE EXECUTIVE SEARCH FIRM · FIVE-DAY TRIP, LONDON, NEW YORK, CHICAGO, WITH

16 THE NEXT STEP

Own the protocol, build the technology, then license it.

What happens next.

1. An introductory conversation about your plans for the IP.
2. A confidential walk-through of the framework and the development programme, under NDA.
3. Terms for an outright acquisition of the existing Travel Performance IP, together with an agreed programme to complete the scientific protocol and prepare it for technology development. The acquirer owns the resulting IP and funds, builds and commercialises the software.

Travel Performance includes no supplement formulations; these are offered separately.

ALT-15°

LIVE LIFE AT ALTITUDE

The two coordinates of a global lifestyle.

ALT is the altitude you operate at.
15° is the longitude in every time zone you cross.
